# Multimodal Mobility and Safety Assessment Background Analysis Report <br> <br> U.S. 1 

 <br> <br> U.S. 1}

From U.S. $\mathbf{9 2}$ to S.R. 430

Section Number: 79030000
Mile Post: $0.000-1.196$
City of Daytona Beach, FL

Prepared for:

Florida Department of Transportation - District Five 719 S Woodland Blvd DeLand, FL 32720

Prepared by:
Kittelson \& Associates, Inc.
225 East Robinson Street, Suite 355
Orlando, FL 32801

October 2019

The Florida Department of Transportation (FDOT) is investing in improving multimodal safety and access along its facilities. To this end, through an effort that developed a Multimodal Demand Score for each roadway, FDOT has identified corridors that have high existing multimodal demand and multimodal infrastructure gaps to begin to identify investments needed along these corridors. In addition to this effort, FDOT also identified the top multimodal corridors that serve high concentrations of transit-dependent populations (zero-car households) and/or households in poverty. The corridors which do not require a corridor planning study are being advanced to Multimodal Mobility and Safety Assessments (MMSA). U.S. 1 from U.S. 92 (International Speedway Boulevard) to State Road (S.R.) 430 (Mason Avenue), is one of the top multimodal corridors identified for an MMSA.

An MMSA is a streamlined approach to identifying investments that would enhance multimodal mobility and safety along a corridor. An MMSA is an efficient and effective way to identify corridor issues and a range of short-, mid-, and long-term improvements for the corridor that are supported by partner agencies.

## CORRIDOR OVERVIEW

The study corridor, U.S. 1/S.R. 5/Ridgewood Avenue from U.S. 92 to S.R. 430, is roughly 1.2 miles long, as shown in Figure 1. The corridor is within the City of Daytona Beach limits in Volusia County. The study corridor is designated as an urban principal arterial with two lanes in each direction. U.S. 1 has raised median separation throughout the study area, with exclusive left turn lanes at major intersections.

Figure 1: Corridor Map

## CONTEXT

## Roadway Characteristics

- The study corridor is a four-lane divided roadway, with exclusive left-turn lanes at signalized intersections. There are also two southbound left-turn lanes at unsignalized intersections, but no other median openings.
- Signalized intersections in the study area include the following locations:

| $\circ$ | U.S. 1 (Ridgewood Avenue) \& U.S. 92 (International Speedway Boulevard) |
| :--- | :--- | :--- |
| $\circ$ | U.S. 1 (Ridgewood Avenue) \& Bay Street |
| $\circ$ | U.S. 1 (Ridgewood Avenue) \& Dr. Mary McLeod Bethune Boulevard |
| $\circ$ | U.S. 1 (Ridgewood Avenue) \& Mullally Street |
| $\circ$ | U.S. 1 (Ridgewood Avenue) \& Fairview Avenue |
| $\circ$ | U.S. 1 (Ridgewood Avenue) \& Madison Avenue |
| $\circ$ | U.S. 1 (Ridgewood Avenue) \& S.R. 430 (Mason Avenue) |

- Bike lanes are present on U.S. 1 north of Bay Street.
- The posted speed of study corridor is 35 mph as shown in Figure 2.
- Sidewalks are present on both sides of U.S. 1 throughout the study area.
- On-street parking is not present on the study corridor.
- Overhead street lighting is present throughout the study corridor.

## Annual Average Daily Traffic

The historical AADTs of the corridor can be found in the table below.

Count station on U.S. 1, 0.343 miles south of S.R. 430

Figure 2: Posted Speed and AADT

## Access Management Classification

This study corridor is classified as Access Class Five, resulting in the FDOT access management standards identified in the following table.

Table 201.3.2 Rule 14-97 - Arterial Access Classifications \& Standards

| Access <br> Class | Median Type | Connection <br> Spacing (feet) |  | Median Opening <br> Spacing (feet) |  | Signal <br> Spacing <br> (feet) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $>45 \mathrm{mph}$ | $\leq 45 \mathrm{mph}$ | Directional | Full | 2640 |
| 2 | Restrictive with <br> Service Roads | 1320 | 660 | 1320 | 2640 | 2640 |
| 3 | Restrictive | 660 | 440 | 1320 | 2640 | 2640 |
| 4 | Non-Restrictive | 660 | 440 |  |  | 2640 |
| 5 | Restrictive | 440 | 245 | 660 | $2640>45 \mathrm{mph}$ |  |
| 6 | Non-Restrictive | 440 | 245 |  | $1320 \leq 45 \mathrm{mph}$ |  |
| 7 | Both Median Types |  | 125 | 330 | 660 | 1320 |

Notes:

1. "Restrictive" physically prevent vehicle crossing.
2. "Non-Restrictive" allow turns across at any point.
3. Speeds shown in this table are posted speeds.

Connection Spacing Near Interchange Ramps:
Connections and median openings located within 1,320 feet of interchange ramps require the following spacing (measured from the ramp furthest from the interchange):

- 440 feet $\leq 45 \mathrm{mph}$
- 660 feet $>45 \mathrm{mph}$
- 1,320 feet on Access Class 2 Facilities > 45 mph

## Transit

The study corridor's public transportation system is operated by Votran. Six routes serve this corridor and the intersection of Dr. Mary McLeod Bethune Boulevard houses a Votran Transfer Plaza. The transit routes are shown in Figure 3.

- Route 15-dark purple runs along northbound U.S. 1 from U.S. 92 to Dr. Mary McLeod Bethune Boulevard. This route serves the area between Orange Avenue and the Votran Transfer Plaza.
- Service is provided on weekdays from 5:37 a.m. to 6:45 p.m. with headway of 30 minutes on weekdays during the day.
- There are two northbound stops:
- Dowling Court Stop 831
- Bay Street Stop 859
- Saturday daytime service begins at 6:07 a.m. and ends at 6:45 p.m. with 30 minutes headways.
- Evening service for this route begins at 7 p.m. and runs until 12:03 a.m. Headways are one hour.
- There are no stops along the study corridor during the evening hours.
- Sunday service begins at 7 a.m. and ends at 6 p.m. Headways are one hour, and there are no service hours after 7 p.m.
- There are no stops along the study corridor on Sundays
- Route 12-Pink runs along northbound U.S. 1 from U.S. 92 to the Votran Transfer Plaza. This route serves the area between the Votran Transfer Plaza and the Pavilion at Port Orange mall.
- Service is provided on weekdays from 6:30 a.m. to 7:21 p.m. with headways of 60 minutes.
- There are three northbound stops:
- Dowling Court Stop 831
- Bay Street Stop 859
- $3^{\text {rd }}$ Avenue Stop 3036
- Route 4-Purple serves the area between the Votran Transfer Plaza and Spruce Creek High School. This route runs along the study corridor (both northbound southbound) between U.S. 92 and Dr. Mary McLeod Bethune Blvd.
- Headways for this route are 30 minutes in both directions starting at 6:32 a.m. to 6:58 p.m. during its daytime service. There are three daytime stops:
- Dowling Court Stop 831 (northbound)
- Bay Street Stop 857 (southbound)
- Bay Street Stop 2956 (northbound)
- Nighttime service begins at 7 p.m. to 12:10 a.m. with hour long headways. There are seven evening stops:
- Dowling Court Stop 831 (northbound)
- Bay Street Stop 857 (southbound)
- Bay Street Stop 859 (northbound)
- San Juan Avenue Stop 3023 (northbound)
- $1^{\text {st }}$ Avenue Stop 907 (northbound)
- Hobart Avenue Stop 927 (southbound)
- Hobart Avenue Stop 920 (northbound)
- Sunday service begins at 7 a.m. and ends at 7 p.m. with hour long headways. Stops mirror Route 4's nighttime service (above).
- Route 5-Light blue runs both northbound and southbound between Dr. Mary McLeod Bethune Boulevard to Fairview Avenue along the study corridor. The service area of this route is between the Votran Transfer Plaza and Flomich Street. There are four stops along this route:
- San Juan Avenue Stop 3023 (northbound)
- $1^{\text {st }}$ Street Stop 909 (northbound)
- Hobart Avenue Stop 927 (southbound)
- Hobart Avenue Stop 929 (northbound)
- Service begins 6:37 a.m. and ends at 6 p.m. on weekdays with one-hour headways during the day. There are no evening or weekend services.
- Route 6-Green runs in both directions along the study corridor between Dr. Mary McLeod Bethune Boulevard to Fairview Avenue
- Headways for this route are one hour in both directions starting at 6:05 a.m. to 7:33 p.m. during its daytime service. There are no evening or weekend services.
- There are five stops:
- San Juan Avenue Stop 3023 (northbound)
- $1^{\text {st }}$ Street Stop 909 (northbound)
- Hobart Avenue Stop 927 (southbound)
- Hobart Avenue Stop 929 (northbound)
- Fairview Avenue Stop 2356 (southbound)
- Route 3 (a,b,c)-Red is the primary route for this corridor running in both directions with multiple stops along the corridor depending on the line ( $\mathrm{a}, \mathrm{b}$, or c ). Each line has one-hour headways that alternate every thirty minutes. This route serves the area between the Votran Transfer Plaza and Airport Road.
- Route 3a service begins at 7 a.m. and ends at 7 p.m. There are no stops for this line along the corridor. There are 14 total stops.
- Route 3b begins at 6:30 a.m. and ends at 7:00 p.m. There are 13 total stops.
- Route 3c begins at 6:02 a.m. and ends at 3:45 p.m. There are 14 total stops.
- Evening service begins at 7 p.m. and ends at 12 a.m. Monday through Friday. There are nine stops.
- Sunday service begins at 7 a.m. and ends at 6:25 p.m. There are nine stops.

Figure 3: Transit

## Land Use and Zoning

U.S. 1 functions mostly as a commercial corridor with some single-family residential and industrial sections. The existing land use map for the study corridor can be found in Figure 4. Commercial designations extend from the corridor in each direction for several blocks, especially near major intersections. Future land use and the zoning code for the corridor, listed in tables below, suggest that this pattern of commercial and residential development will change to mixed-use.

| U.S. 1 Segment |  | Future Land Use |  | Zoning District |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| From | To | On the East | On the West | On the East | On the West |
| U.S. 92 | Bay Street | Commercial Mixed-Use |  | $\begin{aligned} & \text { PD-RD } \\ & \text { RDD3 } \end{aligned}$ |  |
| Bay Street | Dr. Mary McLeod Bethune Boulevard |  |  | RDD3 |  |
| Dr. Mary McLeod Bethune Blvd | San Juan Avenue | Commercial Mixed-Use | Commercial Mixed-Use; Office | $\begin{aligned} & \text { PD-RD } \\ & \text { RDD3 } \end{aligned}$ |  |
| San Juan Avenue | Fairview Avenue | Office |  | PD-RD |  |
| Fairview Avenue | North Street | Level Two Residential |  |  |  |
| North Street | Mason Avenue | Retail | Local Service Industry |  |  |

| Future Land <br> Use | Density/Intensity | Notes |
| :---: | :---: | :---: |
| Commercial <br> Mixed-Use | Floor Area Ratio not to <br> exceed 3 <br> Maximum of 40 <br> dwelling units per acre | - Mixed use development is encouraged based on the <br> availability of a density bonus <br> - <br> Determined to have area served by transit service <br> Also emphasized in the Downtown/Ballough Road <br> Development Plan |
| Level Two <br> Residential | Densities not to <br> exceed 8 dwelling <br> units per acre | The Future Land Use element of the City's <br> comprehensive plan utilized this designation to <br> regulate adjacent developments within specific <br> neighborhoods (G, H, I, J, L, M, N) along the <br> corridor': |

${ }^{1}$ City of Daytona Beach Comprehensive Plan: http://www.codb.us/DocumentCenter/View/12302/Comp-Plan-thru-Ord-18-380?bidId=

| Zoning District | Designation |  |  |

| BA | Business Automotive | 25 feet | $\mathrm{N} / \mathrm{A}$ |

Figure 4: Existing Land Use

## Context Classification

The Context Classification system broadly identifies the various built environments existing in Florida, as illustrated in the figure below. Detailed information could be found in FDOT's Context Classification Handbook ${ }^{3}$.

The context classification for the study corridor is provided in Figure 5. The study corridor has the context classification of C4-Urban General, which is used to define a corridor of mixed uses with small blocks and a developed roadway network. This network usually connects local neighborhoods immediately along the corridor. The context classification of C4-Urban General will result in specific design control provided in the Florida Design Manual for this corridor, as listed in the table below.

| FDM - Design Control | C4-Urban General |
| :---: | :---: |
| Allowable Design Speed Range (mph) | $20-45$ |
| Minimum Travel \& Auxiliary Lane Width | $25-35 \mathrm{mph}: 10 \mathrm{ft}$ <br> $40-45 \mathrm{mph}: 11 \mathrm{ft}$ <br> $\geq 50 \mathrm{mph}: 12 \mathrm{ft}$ |
| Two-Way Left Turn Lane | $25-35 \mathrm{mph}: 11 \mathrm{ft}$ <br> $40 \mathrm{mph}: 12 \mathrm{ft}$ |
| On-Street Parking | On-street parking is permitted based on Context <br> Classification and posted speed of 35 MPH |
| Median Width | $25-35 \mathrm{mph}: 15.5 \mathrm{ft}$ <br> $40-45 \mathrm{mph}: 22 \mathrm{ft}$ |
| Sidewalk Width | 6 ft |

A detailed review was conducted by FDOT D5, and the forms are included in the Appendix.

[^0]

Figure 5: Context Classification

## Bicycle and Pedestrian Generators/Attractors

The bicycle and pedestrian generators and attractors are shown in Figure 6. The density along the corridor will naturally drive pedestrian and bicycling activity in the area. The Votran Transfer Plaza is a major attractor of those who will likely be walking or bicycling to their respective destinations. Figure 6 denotes these locations, many of which being religious institutions, schools, civic institutions, and the natural water features near the area. One major attractor is the nearby Bethune Cookman University (BCU) main campus. This area will attract students and the general traveling public. The northern portion of the corridor will continue to attract bicycle and pedestrian users due to its residential areas and surrounding commercial developments.

## Planned or Proposed Investments

The planned projects by FDOT or local agencies along the corridor are shown in Figure 7.

- Volusia County Pedestrian Lighting Bundle D (FPID: 439881-4) is going to be conducted on 22 intersections on U.S. 1 in Volusia County, from Bay Street to the north. All proposed new fixtures at each intersection shall be LED and all existing fixtures at each intersection shall be converted to LED. The main goal is to improve pedestrian safety at specific signalized intersections by installing streetlighting that offer better visibility. No other intersection improvements are expected.
- Votran's Transit Development Plan (FY 2017 - 2026) recommended enhancements to Route 3A, the primary transit route serving the corridor, suggesting that its frequency be at 20 -minute headways Monday through Saturday ${ }^{4}$. It was also recommended that Routes 4 and 12 establish 30 -minute headways, and that Route 6 add 60 -minute headways on Saturday. These suggestions were part of the Transportation Development Plan that is updated every ten years as a means of complying with state law. These recommendations are meant to be activated at the discretion of transit and local officials should the specific areas be reviewed in the future.
- R2CTPO created a list within its Bicycle and Pedestrian Master Plan which identified locations of community concern. Those that are within the study corridor limits are:
- U.S. 1 and Mason Avenue
- U.S. 1 and Dr. Mary McLeod Bethune Boulevard

If your office has completed, or is in the process of completing, additional studies/projects within the corridor, contact Paul Schoelzel with FDOT D5 Modal Development - Paul.Schoelzel@dot.state.fl.us (386) 943-5246.

Figure 7: Planned Projects

## HISTORIC CRASH ANALYSIS

Five (5) years of available pedestrian and bicyclist crash data, 2012 to 2016, were utilized for the U.S. 1 crash analysis. Crash data was obtained from two sources: 1) The FDOT Crash Analysis Reporting (CAR) database from 2012 to 2016 and 2) The Signal Four Analytics database, maintained by the University of Florida from 2012 to 2016. Those crashes are mapped in Figure 8.

## Severity

A total of 58 pedestrian or bicyclist involved vehicular crashes were reported over the five-year study period. There were four fatal crashes. Eight crashes were a Property Damage Only (PDO) crash and 46 of the crashes were injury crashes, with six reporting an incapacitating injury, 17 reporting non-incapacitating injuries, and 23 reporting possible injuries. Twenty-four of the crashes were pedestrian crashes and 34 of the crashes were bicyclist crashes.

## Time

The reported crashes are displayed by different measures of time (year, month, day, and hour) as follows. Overall, the number of crashes has fluctuated from eight to 16 crashes in a given year. Over the same fiveyear time period, the Average Annual Daily Traffic (AADT) has remained relatively constant. The highest volumes in the period were observed in 2015, with an AADT of 28,000 vehicles per day on the study corridor. The month of December had the highest reported crashes, ten crashes. Thursday ( 11 crashes) was the highest crash day of the week, and weekday crashes ( 45 crashes) were more prevalent than weekend crashes ( 13 crashes). Seventeen crashes occurred during the mid-day peak hours (11 a.m. to 2 p.m.)

## Environmental Factors

Twenty-one crashes ( 36 percent) were reported in non-daylight conditions and seven crashes occurred during wet roadway conditions (12 percent). Five of the crashes were reported to have involved suspected alcohol or drug use.

## Demographics

Nine of the crashes were a hit-and-run crash, with no further information available about the driver. Ten of the crashes involved drivers over the age of 65, and six of the crashes involved drivers between the ages of 54 and 65. Thirty-nine out of the 47 known involved drivers had addresses listed within the areas surrounding the project site.

Four of the non-motorist users involved in the crashes were under the age of 18 and three were over the age of 65 . Seven non-motorist users had a listed address outside of the vicinity of the project site.

## Location and Direction

Several intersections had multiple crashes reported during the study period. The intersection of U.S. 1 \& S.R. 430 had 15 crashes, the intersection of U.S. 1 \& U.S. 92 had 10 crashes, including one fatality, and the intersection of U.S. 1 and Fairview Ave had seven crashes. Forty-six of the crashes ( 79 percent) occurred at or within the influence area of a signalized intersection, including three out of the four fatalities.

Twenty of the crashes occurred within a marked crosswalk, of these crashes, 12 occurred with the nonmotorist user crossing against the indications of the pedestrian signal. Twelve of the crashes occurred with the non-motorist user making a mid-block crossing (or crossing U.S. 1 at an uncontrolled location). Six of the crashes involved vehicles attempting to make a right-on-red movement and five of the crashes involved vehicles making a left-turn at a signalized intersection (two permitted, three protected).

Among the bicyclist crashes, 17 occurred with the bicyclist on a sidewalk or crosswalk and 13 occurred with the bicyclist in the bike lane or on the road. Ten crashes involved the bicyclist riding against the flow of traffic on the sidewalk, four crashes involved the bicyclist riding against the flow of traffic in a bike lane, and three crashes involved a bicyclist running a red light.

Figure 8: Ped \& Bike Crashes

## APPENDIX

- Context Classification
- Signal Phasing and Timing

## CONTEXT CLASSIFICATION REQUEST FORM

## FDOT Use Only

Provisional Context Class Determination: $\qquad$ Begin Mile Point: 0.000 End Mile Point: 1.196

## Summary of Provisional Determination:

Ridgewood Avenue/SR 5 is C4 Urban General because of it's location adjacent to the City of Daytona's economic and civic center. It's a dense urban environment constrained by water on the eastern portion and made up of mostly commercial and multifamily land uses. Medium building setbacks, fronting uses, parking to the side and rear of buildings indicate an urbanized area. Allowable residential and office/retail densities are high and secondary measures align with Urban General characteristics. The future land use indicates a greater mix of land uses and the zoning supports redevelopment for land uses with high densities.

Please allow 10 working days to process a standard review request. In the case of multiple roadway segments, please submit a separate form for each roadway.

CONTEXT CLASSIFICATION MATRIX Table 1 Context Classification Matrix presents a framework to determine the context classification along state roadways. This Context Classification Matrix outlines (1) distinguishing characteristics, (2) primary measures, and (3) secondary measures.

The distinguishing characteristics give a broad description of the land use types and street patterns description of the land within types and street patterns and secondary measures provide more detailed and secondary measures provide more detailed assessments of the existing or future conditions along
the roadway. These measures can be evaluated
aerial and street view imagery, map analysis, and review of existing or future land use or existing zoning information. The Context Classification Matrix presents the primary and secondary measures thresholds for the eight context classifications.

Appendix A illustrates the eight FDOT context classifications through case studies. These case studies present examples of real-world values for the primary and secondary measures that determine a roadway's context classification

| TABLE 1 C | CONTEXT CLASSIFICATION MATRIX | (2) Primary Measures |  |  |  |  |  |  |  | (3) Secondary Measures |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Land Use | Building Height | Building Placement | Fronting Uses | Location of Off-street Parking | Roadway Connectivity |  |  | Allowed <br> Residential <br> Density | Allowed Office/ Retail Density | Population Density | Employment Density |
|  |  |  |  |  |  |  | Intersection Density | Block <br> Perimeters | Block Length |  |  |  |  |
| Context Classification | (1) Distinguishing Characteristics | Description | Floor Levels | Description | Yes/No | Description | Intersections/ Square Mile | Feet | Feet | Dwelling Units/ <br> Acre | $\begin{aligned} & \text { Floor-Area Ratio } \\ & \text { (FAR) } \end{aligned}$ | Persons/Acre | Jobs/Acre |
| C1-Natural | Lands preserved in a natural or wilderness condition, including lands unsuitable for settlement due to natural conditions. | Conservation Land, Open Space, or Park | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A | N/A |
| C2-Rural | Sparsely settled lands; may include agricultural land, grassland, woodland, and wetlands. | Agricultural or Single-Family Residential | 1 to 2 | Detached buildings with no consistent pattern of setbacks | No | N/A | <20 | N/A | N/A | $<1$ | N/A | <2 | N/A |
| C2T-Rural Town | Small concentrations of developed areas immediately surrounded by rural and natural areas; includes many historic towns. | Retail, Office, Single-Family or Multi-Family Residential, Institutional, or Industrial | 1 to 2 | Both detached and attached buildings with no or shallow (<20') front setbacks | Yes | Mostly on side or rear; occasionally in front | >100 | <3,000 | <500 | >4 | >0.25 | N/A | >2 |
| C3R-Suburban Residential | Mostly residential uses within large blocks and a disconnected or sparse roadway network. | Single-Family or Multi-Family Residential | 1 to 2, with some 3 | Detached buildings with medium ( $20^{\prime}$ to 75') front setbacks | No | Mostly in front; occasionally in rear or side | <100 | N/A | N/A | 1 to 8 | N/A | N/A | N/A |
| C3C-Suburban Commercial | Mostly non-residential uses with large building footprints and large parking lots within large blocks and a disconnected or sparse roadway network. | Retail, Office, MultiFamily Residential, Institutional, or Industrial | 1 (retail uses) and 1 to 4 (office uses) | Detached buildings with large (>75') setbacks on all sides | No | Mostly in front; occasionally in rear or side | <100 | >3,000 | $>660$ | N/A | <0.75 | N/A | N/A |
| C4-Urban General | Mix of uses set within small blocks with a well-connected roadway network. May extend long distances. The roadway network usually connects to residential neighborhoods immediately along the corridor or behind the uses fronting the roadway. | Single-Family or Multi-Family Residential, Institutional, Neighborhood Scale Retail, or Office | 1 to 3 , with some taller buildings | Both detached and attached buildings with no setbacks or up to medium (<75') front setbacks | Yes | Mostly on side or rear; occasionally in front | >100 | <3,000 | <500 | >4 | N/A | $>5$ | $>5$ |
| C5-Urban Center | Mix of uses set within small blocks with a well-connected roadway network. Typically concentrated around a few blocks and identified as part of a civic or economic center of a community, town, or city. | Retail, Office, Single-Family or Multi-Family Residential, Institutional, or Light Industrial | 1 to 5 , with some taller buildings | Both detached and attached buildings with no or shallow (<20') front setbacks | Yes | Mostly on side or rear; occasionally in front, or in shared off-site parking facilities | >100 | <2,500 | <500 | >8 | >0.75 | $>10$ | >20 |
| C6-Urban Core | Areas with the highest densities and building heights, and within FDOT classified Large Urbanized Areas (population $>1,000,000)$. Many are regional centers and destinations. Buildings have mixed uses, are built up to the roadway, and are within a well-connected roadway network. | Retail, Office, Institutional, or Multi-Family Residential | $>4$, with some shorter buildings | Mostly attached buildings with no or minimal (<10') front setbacks | Yes | Side or rear; often in shared off-site garage parking | >100 | <2,500 | <660 | $>16$ | $>2$ | >20 | >45 |

More information on measures with undefined thresholds (N/As) are included in Appendix B. The thresholds presented in Table 1 are based on the
following sources, with modifications made based on Florida case studies.

1) 2008 Smart Transportation Guidebook: Planning and Designing Highways and Streets that Support Sustainable and Livable Communities, New Jersey Department of Transportation and Pennsy/Vania Department of Transportation:
2) 2012 Forida TOD Guidebook, Florida Department of Transportation;
3) 2009 SmartCode Version 9.2., Duany, Andres, Sandy Sorlien, and William Wright; and
4) 2010 Designing Walkable Urban Thoroughtares: A Context Sensitive Approach, Institute of Transportation Engineers and Congress for the New Urbanism.

## Notes

1) Offset referenced to end of first through movement $2 \& 6$
2) Program float force-offs during coordination except Pattern 3 (Fixed)
3) 7 seconds of leading pedestrian interval program for phases $2,4,6, \& 8$
4) Use Max II during coordination
5.) Program additional Timing Plans as shown in table. Only Max IIIII values vary.

|  |  |  | Max IIIIII Timings |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
