## U.S. 92

Multimodal Mobility and Safety Assessment Background Analysis Report

October 2019

## 

# Multimodal Mobility and Safety Assessment Background Analysis Report U.S. 92 

From U.S. 1 to Halifax Avenue

Section Number: 79080000; 79080001
Mile Post: $0.000-0.230 ; 0.000-0.770$
City of Daytona Beach, FL

October 2019

The Florida Department of Transportation (FDOT) is investing in improving multimodal safety and access along its facilities. To this end, through an effort that developed a Multimodal Demand Score for each roadway, FDOT has identified corridors that have high existing multimodal demand and multimodal infrastructure gaps to begin to identify investments needed along these corridors. In addition to this effort, FDOT also identified the top multimodal corridors that serve high concentrations of transit-dependent populations (zero-car households) and/or households in poverty. The corridors which do not require a corridor planning study are being advanced to Multimodal Mobility and Safety Assessments (MMSA). U.S. 92 from U.S. 1 to Halifax Avenue, is one of the top multimodal corridors identified for an MMSA.

An MMSA is a streamlined approach to identifying investments that would enhance multimodal mobility and safety along a corridor. An MMSA is an efficient and effective way to identify corridor issues and a range of short-, mid-, and long-term improvements for the corridor that are supported by partner agencies.

## CORRIDOR OVERVIEW

The study corridor, U.S. 92/International Speedway Boulevard from U.S. 1 to Halifax Avenue, is roughly one mile in length as seen in Figure 1. The entire corridor is within the City of Daytona Beach limits. The study corridor is a four-lane principal arterial. Most of the corridor is part of a bridge extending over the Halifax River, encompassing two bridge decks (bridge structure ID of 790187 for the westbound deck and 790188 for the eastbound deck).

Figure 1: Corridor Map

## CONTEXT

## Roadway Characteristics

- The study corridor is a four-lane roadway, with a center two-way left-turn lane on the portions of the study corridor not part of the bridge. Once the roadway is elevated as part of the bridge decks, there is a concrete barrier which splits opposing traffic.
- Signalized intersections in the study area include the following locations:
- U.S. 92 \& U.S. 1
- U.S. 92 \& Palmetto Avenue
- U.S. 92 \& Beach Street
- U.S. 92 \& Halifax Avenue
- The posted speed limit of U.S. 92 is 30 mph through the corridor except the bridge section. The posted speed limit for the bridge section is 40 mph , as shown in Figure 2.
- There are no marked bike lanes present on the corridor.
- There is a 7 -ft to 8 -ft paved shoulder starting at the bridge after South Street, extending for the remaining length of the corridor
- Sidewalks are present on both sides of U.S. 92 throughout the study area.
- On-street parking is present on both sides of U.S. 92 from Palmetto Ave to Beach Street.
- Overhead street lighting is present throughout the study corridor.

## Annual Average Daily Traffic

The historical AADTs of the corridor can be found in the table below. The corridor generally serves 20,000 to 25,000 AADT.

Station 790337: on U.S. 92, 0.474 miles west of S.R. A1A
Station 795105: on U.S. 92, 0.05 miles east of U.S. 1

Figure 2: Posted Speed and AADT
MMSA for US 92, from US 1 to Halifax Avenue

## Access Management Classification

This segment is categorized as Access Class Three and Seven, resulting in the FDOT access management standards identified in the following table. The corridor is Access Class Seven from U.S. 1 to Beach Drive, and it is Access Class Three for the remainder of the corridor, from Beach Drive to Halifax Avenue.

Table 201.3.2 Rule 14-97 - Arterial Access Classifications \& Standards

| Access Class | Median Type | Connection Spacing (feet) |  | Median Opening Spacing (feet) |  | Signal Spacing (feet) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | > 45 mph | $\leq 45 \mathrm{mph}$ | Directional | Full |  |
| 2 | Restrictive with Service Roads | 1320 | 660 | 1320 | 2640 | 2640 |
| 3 | Restrictive | 660 | 440 | 1320 | 2640 | 2640 |
| 4 | Non-Restrictive | 660 | 440 |  |  | 2640 |
| 5 | Restrictive | 440 | 245 | 660 | $\begin{aligned} & 2640>45 \mathrm{mph} \\ & 1320 \leq 45 \mathrm{mph} \end{aligned}$ |  |
| 6 | Non-Restrictive | 440 | 245 |  |  | 1320 |
| 7 | Both Median Types | 125 |  | 330 | 660 | 1320 |
| Notes: <br> 1. "Restrictive" physically prevent vehicle crossing. <br> 2. "Non-Restrictive" allow turns across at any point. <br> 3. Speeds shown in this table are posted speeds. <br> Connection Spacing Near Interchange Ramps: |  |  |  |  |  |  |

## Transit

The study corridor's public transportation system is operated by Votran and displayed in Figure 3. Five routes serve the study corridor:

- Route 1-Gray-purple operates in both directions of the corridor from the Votran Transfer Plaza to South Peninsula Drive. This route serves the area between the Votran Transfer Plaza and Halifax Drive.
- Daytime service is provided on Monday-Saturday from 5:40 a.m. to 7:10 p.m. with a headway of 60 minutes. There are no stops along the corridor.
- Nighttime and Sunday buses do not run along the corridor.
- Route 17A/B-Black serves the corridor along the bridge providing connections to S.R. A1A, Dunlawton Avenue, and the Votran Transfer Plaza.
- 17A Weekday service begins at 6 a.m. and ends at 6:30 p.m. with 60-minute headways
- 17A Saturday service begins at $7 \mathrm{a} . \mathrm{m}$. and ends at 6:30 p.m. with 60-minute headways
- 17B Weekday service begins at $7 \mathrm{a} . \mathrm{m}$. and ends at 6:30 p.m. with 60-minute headways
- 17B Saturday service begins at 6:30 a.m. and ends at $6 \mathrm{p} . \mathrm{m}$. with 60-minute headways
- Route 18-Turqoise runs in both directions on select parts of the corridor and acts as a feeder line for Route 17. This route operates in a loop between the Votran Transfer Plaza and the Intermodal Transfer Facility.
- Service is provided on weekdays and Saturday from 7 a.m. to 6:30 p.m. with headways of 60 to 70 minutes. There are no stops along the corridor.
- Route 19-Light Purple serves the area between the Votran Transfer Plaza and Nova Road.
- Service is provided on weekdays and Saturday from 6 a.m. to 6:40 p.m. with a headway of 60 minutes. There are no stops along the corridor.
- Route 8-Gray runs along the study corridor between North Beach Street and Halifax Avenue. It serves the area between the Votran Transfer Plaza and Bellair Plaza.
- Service is provided on weekdays from 6:30 a.m. to 10 p.m. with headways of 60 minutes.
- The closest stop to the study corridor is the Votran Transfer Plaza (on the west side of the Halifax River) and the Intermodal Transit Facility (on the east side of the Halifax River).
- Saturday service begins at 7:30 a.m. and runs until 6:21 p.m. with headways of 60 minutes.

Figure 3: Transit

## Land Use and Zoning

The existing land use near U.S. 92 is shown in Figure 4. The U.S. 92 study corridor has existing commercial uses on either end of the bridge, with surrounding residential on the eastern end. Similar land use patterns are expected in the future, focusing on commercial and retail uses. Areas surrounding the western portion of the corridor also include recreation and institutional uses, including City Island Park. Details of the land use and zoning district throughout the study corridor and the designations are included below.

| U.S. 92 Segment |  | Future Land Use |  | Zoning District |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| From | To | On the North | On the South | On the North | On the South |
| U.S. 1 | Palmetto Avenue | RetailCommercial Mixed Use |  | $\begin{aligned} & \text { RDD-3 } \\ & \text { PD-RD } \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { RDD-3 } \\ & \text { RDD-2 } \\ & \hline \end{aligned}$ |
| Palmetto Avenue | Beach Street | Commercial Mixed Use |  | $\begin{aligned} & \text { RDD-1 } \\ & \text { RDD-2 } \end{aligned}$ |  |
| Beach Street | City Island Park | Parks and Recreation |  | PD-G |  |
| Halifax River |  |  |  |  |  |
| End of eastern bridge deck | Halifax Avenue | Commer | ixed Use | PD-G | BR-1 |

| Future Land Use | Density/Intensity | Notes |
| :---: | :---: | :---: |
| Commercial Mixed-Use | Floor Area Ratio not to exceed 3 Maximum of 40 dwelling units per acre | - Mixed use development is encouraged based on the availability of a density bonus <br> - Determined to have area served by transit service <br> - Also emphasized in the Downtown/Ballough Road Development Plan |
| Retail | Floor Area Ratio not to exceed 3 Maximum of 40 dwelling units per acre | - To be for mostly retail establishments but can contain other facilities such as "amusements" and tourist related shopping <br> - Similar building standards as Commercial MixedUse designation |

| Zoning District | Designation |  |  |
| :---: | :---: | :---: | :---: |
|  | Description | Front Setbacks | Maximum Height |
| PD-G | Planned Development- <br> General | Determined in PD <br> Plan/Agreement | Determined in PD <br> Plan/Agreement |
| PD-RD | Planned Development- <br> Redevelopment | Determined in PD <br> Plan/Agreement | Determined in PD <br> Plan/Agreement |
| RDD-3 | Redevelopment Downtown <br> - Commercial | $\mathrm{N} / \mathrm{A}$ | $\mathrm{N} / \mathrm{A}$ |
| RDD-2 | Redevelopment Downtown <br> - Central Business District | 10 ft | 150 ft |
| BR-1 | Business Retail | 25 feet | $\mathrm{N} / \mathrm{A}$ |

[^0]

Figure 4: Existing Land Use MMSA for US 92, from US 1 to Halifax Avenue

## Context Classification

The Context Classification system broadly identifies the various built environments existing in Florida, as illustrated in the figure below. Detailed information could be found in FDOT's Context Classification Handbook ${ }^{2}$.

The context classification for the study corridor is provided in Figure 5. The study corridor has the context classification of C4-Urban General, which is used to define a corridor of mixed-uses with small blocks and a developed roadway network. This network usually connects local neighborhoods immediate along the corridor. The context classification of C4-Urban General will result in the following specifications provided in the Florida Design Manual for this corridor.

| FDM - Design Control | C4-Urban General |
| :---: | :---: |
| Allowable Design Speed Range (mph) | $30-45$ |
| Minimum Travel \& Auxiliary Lane Width | $25-35 \mathrm{mph}: 10 \mathrm{ft}$ <br> $40-45 \mathrm{mph}: 11 \mathrm{ft}$ <br> $\geq 50 \mathrm{mph}: 12 \mathrm{ft}$ |
| Two-Way Left Turn Lane | $25-35 \mathrm{mph}: 11 \mathrm{ft}$ <br> $40 \mathrm{mph}: 12 \mathrm{ft}$ |
| On-Street Parking | On-street parking is permitted based on Context <br> Classification and posted speed of 35 MPH |
| Median Width | $25-35 \mathrm{mph}: 15.5 \mathrm{ft}$ <br> $40-45 \mathrm{mph}: 22 \mathrm{ft}$ |
| Sidewalk Width | 6 ft |

A detailed review was conducted by FDOT D5, and the forms are included in the Appendix.

Figure 5: Context Classification
MMSA for US 92, from US 1 to Halifax Avenue

## Bicycle and Pedestrian Generators/Attractors

The bicycle and pedestrian generators and attractors are displayed in Figure 6. A primary adjacent point of interest is City Island Park, housing recreational areas, a baseball stadium, and the Volusia County Courthouse Annex. Two pedestrian access bridges to City Island Park are located on the west end of the Halifax River Bridge, near the intersection of U.S. 92 and Beach Street. There is also a park located along the Halifax River on the western bank. The beach is located east of the study corridor, leading to east-west pedestrian and bicyclist travel between downtown and the beach along U.S. 92. Other nearby attractors include the Votran Transfer Plaza, Pure in Heart Christian Academy, and multiple churches.

## Completed or Planned Investments

The planned projects by FDOT or local agencies along the corridor are shown in Figure 7.

- Volusia County Pedestrian Lighting Bundle B (FPID: 439881-2) is going to be conducted on 18 intersections on U.S. 92 in Volusia County, from Palmetto Avenue to South of Longwood Drive. All proposed new fixtures at each intersection shall be LED and all existing fixtures at each intersection shall be converted to LED. The main goal is to improve pedestrian safety at specific signalized intersections by installing streetlighting that offer better visibility. No other intersection improvements are expected.
- U.S. 92 and S.R. A1A Roundabout (FPID: 437942-1) denotes an improvement made from the Halifax River Bridge to S.R. A1A on U.S. 92. The work includes a roundabout at the intersection of these two roadways and anticipated improvements on all approaches. Preliminary Engineering is ongoing, scheduled through 2021, and construction is programmed for $2023 .{ }^{3}$
- R2CTPO adheres to a 2040 Long Range Transportation Plan. This plan calls for improved pedestrian safety measures along U.S. 92 through future project programming. This programming is not denoted in the plan. ${ }^{4}$

If your office has completed, or are in the process of completing, additional studies/projects within the corridor, contact Paul Schoelzel with FDOT D5 Modal Development - Paul.Schoelzel@dot.state.fl.us (386) 943-5246.

Figure 7: Planned Projects

## HISTORIC CRASH ANALYSIS

Five (5) years of available pedestrian and bicyclist crash data, 2012 to 2016, were utilized for the U.S. 92 crash analysis. Crash data was obtained from two sources: 1) the FDOT Crash Analysis Reporting (CAR) database and 2) the Signal Four Analytics database, maintained by the University of Florida. Those crashes are mapped in Figure 8.

## Severity

A total of 14 pedestrian or bicyclist involved vehicular crashes were reported over the five-year study period. There was one fatal crash, which occurred at night with a northbound pedestrian crossing U.S. 92 at U.S. 1 on the east leg crosswalk. The pedestrian was stuck by a vehicle that was westbound on U.S. 92 and traveled through the intersection on a green light. Two crashes were a Property Damage Only (PDO) crash and 11 of the crashes were injury crashes, with two reporting an incapacitating injury, five reporting nonincapacitating injuries, and four reporting possible injuries. Six of the crashes were pedestrian crashes and eight of the crashes were bicyclist crashes.

## Time

The reported crashes are displayed by different measures of time (year, month, day, and hour) as follows. Overall, the number of crashes has fluctuated from zero to seven crashes in a given year. Over the same five-year time period, the Average Annual Daily Traffic (AADT) decreased from 2012 to 2013, before increasing from 2013 to 2016. The highest volumes in the period were observed in 2016, with an average AADT of 22,900 vehicles per day across the two AADT sections of the study corridor. The month of May had the highest reported crashes, three crashes. Friday (four crashes) was the highest crash day of the week, and weekday crashes ( 12 crashes) were more prevalent than weekend crashes ( 2 crashes). Crashes were observed throughout the day, with no peaks related to morning or evening peak vehicle hours. There were four crashes between 10 a.m. and 2 p.m., three crashes between 3 p.m. and 4 p.m., and three crashes between 6 p.m. and 10 p.m.

## Environmental Factors

Five crashes were reported in non-daylight conditions and two crashes occurred during wet roadway conditions. One of the crashes was reported to have involved suspected alcohol or drug use.

## Demographics

One of the crashes was a hit-and-run crash, with no further information available about the driver. One of the crashes involved a driver over the age of 65 , and two of the crashes involved drivers between the ages of 54 and 65 . Seven out of the 10 known involved drivers had addresses listed within the areas surrounding the project site.

None of the non-motorist users involved in the crashes were under the age of 18, and one was over the age of 65 . Three non-motorist users had a listed address outside of the vicinity of the project site.

## Location and Direction

All of the crashes on the study corridor occurred to the west of the bridge. All of the crashes occurred within the influence area of a signalized intersection. Ten of the crashes occurred at the intersection of U.S. 1 and U.S. 92, including the one fatal crash. The intersections of U.S. 92 \& Palmetto Avenue and U.S. 92 \& Beach Street each had two recorded crashes.

Six of the crashes occurred in a marked crosswalk. Two of these crashes occurred when the non-motorist user entered the crosswalk against the indication of the pedestrian signal and two crashes occurred with a vehicle attempting to make a right-on-red movement. Two pedestrian mid-block crossing crashes occurred within the influence area of a signalized intersection, but not within the marked crosswalks.

## CONTEXT CLASSIFICATION REQUEST FORM

Please allow 10 working days to process a standard review request. In the case of multiple roadway segments, please submit a separate form for each roadway.

CONTEXT CLASSIFICATION MATRIX Table 1 Context Classification Matrix presents a framework to determine the context classification along state roadways. This Context Classification Matrix outlines (1) distinguishing characteristics, (2) primary measures, and (3) secondary measures.

The distinguishing characteristics give a broad description of the land use types and street patterns found within each context classification. The primary and secondary measures provide more detailed assessments of the existing or future conditions along the roadway. These measures can be evaluated the roadway. These measures can be evaluated
aerial and street view imagery, map analysis, and review of existing or future land use or existing zoning information. The Context Classification Matrix presents the primary and secondary measures thresholds for the eight context classifications.

Appendix A illustrates the eight FDOT context classifications through case studies. These case studies present examples of real-world values for the primary and secondary measures that determine a roadway's context classification

| TABLE1 CO | ONTEXT CLASSIFICATION MATRIX | (2) Primary Measures |  |  |  |  |  |  |  | (3) Secondary Measures |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Land Use | Building Height | Building Placement | Fronting Uses | Location of Off-street Parking | Roadway Connectivity |  |  | Allowed <br> Residential <br> Density | Allowed Officel Retail Density | Population Density | Employment Density |
|  |  |  |  |  |  |  | Intersection Density | Block Perimeters | Block Length |  |  |  |  |
| Context Classification | (1) Distinguishing Characteristics | Description | Foor Levels | Description | YesNo | Description | Intersections/ Square Mile | Feet | Feet | $\begin{aligned} & \text { Duelling Units } \\ & \text { Acre } \end{aligned}$ | $\begin{aligned} & \text { Hoor-Area Ratio } \\ & \text { (FAR) } \end{aligned}$ | Persons/Acre | Jobs/Acre |
| C1-Natural | Lands preserved in a natural or wilderness condition, including lands unsuitable for settlement due to natural conditions. | Conservation Land, Open Space, or Park | NA | NA | NA | NA | NA | NA | NA | NA | NA | NA | NA |
| C2-Rural | Sparsely settled lands; may include agricultural land, grassland, woodland, and wetlands. | Agricultural or Single-Family Residential | 1 to 2 | Detached buildings with no consistent pattern of setbacks | No | NA | $<2$ | NA | N/ | 4 | NA | $<2$ | NA |
| C2T-Rural Town | Small concentrations of developed areas immediately surrounded by rural and natural areas; includes many historic towns. | Retail, Office, Single-Family or Multi-Family Residential, Institutional, or Industrial | 1 to 2 | Both detached and attached buildings with no or shallow (<20') front setbacks | Yes | Mostly on side or rear; occasionally in front | >100 | <3,000 | < 500 | >4 | >0.25 | NA | >2 |
| C3R-Suburban Residential | Mostly residential uses within large blocks and a disconnected or sparse roadway network. | Single-Family or Multi-Family Residential | 1 to 2, <br> with some 3 | Detached buildings with medium ( $20^{\circ}$ to <br> 75) front setbacks | No | Mostly in front; occasionally in rear or side | 400 | NA | N/ | 1 to 8 | NA | NA | NA |
| C3C-Suburban Commercial | Mostly non-residential uses with large buillding footprints and large parking lots within large blocks and a disconnected or sparse roadway network. | Retail, office, MultiFamily Residential, Institutional, or Industrial | 1 (retail uses) and 1 to 4 (office uses) | Detached buildings with large (>75') setbacks on all sides | No | Mostly in front; occasionally in rear or side | 400 | >3,000 | >660 | NA | $<0.75$ | NA | NA |
| C4-Urban General | Mix of uses set within small blocks with a well-connected roadway network. May extend long distances. The roadway network usually connects to residential neighborhoods immediately along the corridor or behind the uses fronting the roadway. | Single-Family or Multi-Family Residential, Institutional, Neighborhood Scale Retail, or office | 1 to 3, with some taller buildings | Both detached and attached builldings with no setbacks or up to medium ( $<75^{\prime}$ ) front setbacks | Yes | Mostly on side or rear occasionally in front | >100 | <3,000 | <500 | >4 | NA | >5 | >5 |
| C5-Urban Center | Mix of uses set within small blocks with a well-connected roadway network. Typically concentrated around a few blocks and identified as part of a civic or economic center of a community, town, or city. | Retail, Office, Single-Family or Multi-Family Residential, Institutional, or Light Industrial | 1 to 5 , with some taller buildings | Both detached and attached buildings with no or shallow (<20') front setbacks | Yes | Mostly on side or rear; occasionally in front, or in shared off-site parking facilities | >100 | <2,500 | < 500 | >8 | >0.75 | >10 | >20 |
| C6-Urban Core | Areas with the highest densities and building heights, and within FDOT classified Large Urbanized Areas (population $>1,000,000$ ). Many are regional centers and destinations. Buildings have mixed uses, are built up to the roadway, and are within a well-connected roadway network. | Retail, Office, Institutional, or Multi-Family Residential | $>4$, with some shorter buildings | Mostly attached buildings with no or minimal ( $<10$ ') front setbacks | Yes | Side or rear; often in shared off-site garage parking | >100 | <2,500 | <660 | >16 | >2 | >20 | >45 |

More information on measures with undefined thresholds (N/AS) are included in Appendix B. The thresholds presented in Table 1 are based on the
following sources, with modifications made based on Aorida case studies:

1) 2008 Smart Transportation Guidebook. Planning and Designing Highwars and Streets that Support Sustainable and Livable Com munities, New Jersey Department of Transportation and Penns/Varia Department of Transportation:
2) 2012 Horida TOD Guidebook, Forida Department of Transportation;
3) 2009 SmartCode Version 9.2, Duary, Andres, Sandy Sortien, and William Wright, and
4) 2010 Designing Walkzable UUTban Thoroughtfares: A Context Sennsitive Apporoach, Institute of Transportation Engineers and Congress for the New Urbanism
